## Section 5. GENERAL WATER SYSTEM INFORMATION

- A. Name of system, if named: City of Longview Parks Department
- B. Briefly describe your proposed water system. (See instructions.)  
The Existing Lake Sacajawea Flushing Water System is comprised of three (3) pumps (one 15 horsepower (1170 gpm), one 25 horsepower (2340 gpm) and one 40 horsepower (3500 gpm)). From the pump station the water is conveyed in a 12-inch diameter pipe for approximately 1500 feet before discharging into a ditch which conveys the flushing water to Lake Sacajawea. Another ditch returns the water from Lake Sacajawea to the Columbia River (Oregon Way Pump Station). No consumption of the water takes place. Instead, it merely is used to flush the lake to prevent aesthetic problems associated with stagnant water. The proposed improvements to the Water Treatment Plant will combine the functions of the existing Lake Sacajawea Flushing Water Pump Station and the River Intake Pump Station that supplies the Regional Water Treatment Plant. This new pump station will be provided with four (4) 125 horsepower vertical turbine pumps. Lake Sacajawea is under the jurisdiction of the Dept. of Fisheries and is stocked yearly.

### Section 3 - Statement of Intent

The estimate of the maximum annual quantity of water to be used is based on historical demand summarized below. Since the flow from the pump station is not metered, the pump discharge was based on pump run times and are as follows:

1990	681
1991	1,905
1992	1,325
1993	395

Water usage is limited to those times when turbidity is less than 30 NTU.
